SPEND ANALYTICS

Analyze spend across systems and organisational structures to identify trends, risks and optimisation opportunities.

BENEFITS

- 100% visibility on all spend – PO and non-PO, direct and indirect, single or multiple systems. Complete and accurate data with drill-downs streamlines decision-making.
- Consolidated real-time spend data across multiple systems and locations.
- Analyse supply chain operations for breakdown of business processes, inefficiencies, and risk.
- Increase savings through accurate, detailed spend analysis by material, commodity, general ledger, vendor, industry, plant, or purchasing category.
- Track spend trends by category over time to monitor behavior and track process improvements.

PRIMARY FEATURES

Supply Chain Empowerment: Comprehensive view of spend gives supply chain the ability to ensure all spend is accounted for and maximise savings by negotiating more advantageous terms based on greater levels of spend.

Dashboards: Visualise PO process gaps, drivers of supply chain performance and inefficiencies at a quick glance.

Purchase Order Analysis: Ability to analyse each stage of the purchase order process, from the creation of the purchase order to the number and types of changes made to the close of the purchase order, as well as all POs that remain unclosed.

Spend Controls: Reduce Maverick spend with detailed analysis that enables supply chain to target the sources of uncontrolled spend and put a stop to it.

ARE YOU FACING THESE CHALLENGES?

Limited visibility to all stages of your complex supply chain environment.

Controlling Maverick spend and ensuring spend management compliance.

Inefficiencies and breakdown in processes and controls, supply chain can drastically increase its administrative efficiency while ensuring greater oversight on spend.

Increasing costs in the supply chain with a need to leverage current supplier base.
