

## PROCESS ANALYTICS

Monitor and enforce business process controls and performance metrics through interactive data mining. Drill down to transaction-level information with just a click to access the details necessary to take action on results outside process control limits.

### BENEFITS

- Extensive analytics provide a deeper understanding of opportunities in areas of operational improvement.
- Insight into process gaps and drivers of business performance to reduce risks and ensure compliance.
- Identification of inefficiencies and better allocate time, employees, and resources to save money and streamline processes.
- Visibility of transactions across multiple ERP systems all in one view for reporting and KPIs.
- Ability to act on the strategic level insights whilst enabling AP teams to drill down to details necessary to implement corrective actions.
- At a glance view of out-of-compliance performance metrics with transaction level specifics required to remedy anomalies.

### PRIMARY FEATURES

**Comprehensive View:** Provides a deeper understanding of opportunities in areas of operational improvement in a single view across multiple ERP systems, including P-Card and third-party payment systems.

**Advanced Analytics:** Operational reports identify breakdowns in business processes, inefficiencies, and risk.

**Flexible and Easy to Use:** User friendly interface with minimal training required to use. Highly configurable to ensure it works with your environment.

**Dashboards:** Visualise process gaps, drivers of business performance, and inefficiencies at a quick glance.

### ARE YOU FACING THESE CHALLENGES?

Difficulty obtaining data from all ERP systems including P-Card and third-party payment systems for reporting and KPIs.

Breakdown in business processes leading to inefficiencies and higher costs.

Struggling to identify highest priority processes to apply automation for greatest ROI.

Multiple payment term and methods and delinquent payment fees.

### WHO BENEFITS?

- ✓ Accounts Payable
